

# Risk Analysis, Mitigation and Intervention

“Insurers shun many ships carrying goods through the Red Sea.”

CNN Business, 17.01.2024

+900 % War Risk premium

+70% fuel cost

-1,3% Global Trade

Maritime security is becoming increasingly relevant - and requires expert support. Without a clear idea of the risks, the quality of mitigation approaches and adequate responses, insurance coverage is difficult to obtain – especially at sustainable premiums.

The maritime industry is exposed to considerable risk from hybrid threats. Attacks on pipelines and ships have increased rapidly in recent years due to geopolitical rivalry and conflict – as in Ukraine and the Red Sea.

Nexmaris assists your maritime risk management to adapt to the high complexity of the threat. We offer for maritime security what has become standard practice in cyber security: enabling insurance coverage through expert risk analysis, efficient and effective risk mitigation and limiting damage by adequate incident response.

## Risk Assessment

- Risk assessment for maritime companies
- Analysis of organizational maturity in dealing with security risks
- Assessment according to legal requirements, state-of-the-art technology and best practice in the industry

## Integrated overall approach

- Synergistic consideration of security, safety and sustainability
- Analysis of maritime transport and supply chains

## Cooperating with:

## Intervention, Damage limitation & assessment:

- Emergency response and communication
- Communication with navies and law-enforcement
- Recovery and salvage
- Damage assessment

## Our Value Proposition:

- Expert maritime risk management
- State-of-the-art technology integration.
- Security, safety, sustainability synchronized.
- Incident response and damage assessment
- Comprehensive maritime transport chain analysis
- Competitive advantage through enhanced resilience

## Nexmaris in the media:

## Co-authors of the report on maritime resilience of the Federal Republic of Germany
